Consultatie

Classificatie : Aankoopskeuring

Anamnese : Prepurchase examination for selling purpose.

Klinisch : Identity checked and conform with ID chip number.

Only the abnormalities or normal anatomical variations will be noted.
Intended use: showjumping sportshorse.
Actual level: just saddle broken

Clinical examination:
Good general condition, alert, shod.
No significant abnormalities found on visual inspection and palpation.

Orthopaedic examination:
- Circumduction with hindlegs, more expressed with RH.
- No lameness when walking and trotting on a straight line on a hard surface.
- No lameness when trotting on a circle on hard and soft surfaces.
- Flexion test distal limb fronts: negative, no lameness.
- Flexion test of hocks and stifles: negative, no lameness.
- Constant crosscanter. Hindlimb weakness.
Examination of the eyes:
No significant abnormalities seen.

Endoscopic examination of the upper respiratory system:
No clinical indications.

Radiographical examination (views):
- front feet: LM, DP, PaPr-PaDiO and DPr--PDiO
- hocks: LM, DP, DL-PIMO and DM-PILO
- stifles: LM, caud-cran
- hind + front fetlocks: LM, DP, DM-PLO, DL-PMO
- Neck: LL
- Back: LL

Radiographical findings:
LF foot: Small fragment medial aspect distal articular margin of the navicular bone.
RF foot: No significant bony abnormalities radiographically visible.
L hock: No significant bony abnormalities radiographically visible.
R hock: No significant bony abnormalities radiographically visible.
L stifle: No significant bony abnormalities radiographically visible.
R stifle: No significant bony abnormalities radiographically visible.
LH fetlock: No significant bony abnormalities radiographically visible.
RH fetlock: No significant bony abnormalities radiographically visible.
LF fetlock: Irregular lining palmar aspect medial sesamoid bone.
RF fetlock: No significant bony abnormalities radiographically visible.
Neck: No significant bony abnormalities radiographically visible.
Back: No significant bony abnormalities radiographically visible.

PS:
The horse is easy to examine.
During the examination, there were no indications of stereotypical behaviour (for example: windsucking).
Blood sample for doping-analysis: not requested.
Blood sample for general screening: not requested.

Besluit : On the examination of today 18/10/21 the above mentioned horse Diquilly Z did not present any lameness. Radiographic evaluation did not show important abnormalities that compromise the use of this horse.

Therapie :

Met vriendelijke groeten,

Jorge Martinez
